Billing & inventory, quotations, letters and letterheads

For Agile staff, accounts team and admins

Version 1.0 - October 2026

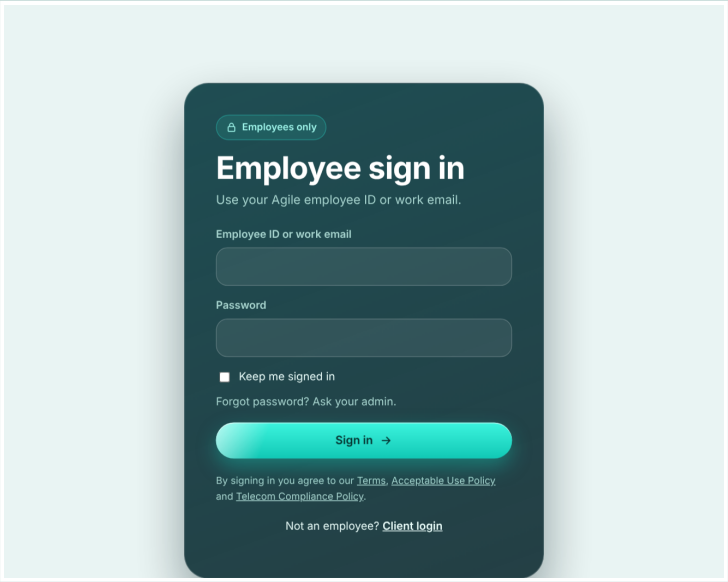

agiletechexpert.com/portal/

Contents

1 Signing in and who can see what
2 First-time setup (admin)
3 Customer accounts and ledger
4 Inventory, stock and serial numbers
5 Making a tax invoice
6 Editing, cancelling and receiving payment
7 Reports: quarterly, half-yearly and yearly
8 Quotations and techno-commercial proposals
9 Letters and blank letterheads
10 Onboarding a calling / messaging client (compliance)
11 Daily good practice and security
12 Quick help (problems and fixes)

1. Signing in and who can see what

Open **agiletechexpert.com/portal/** and choose **Employee login**. Use the username and password your admin gave you. Tick *Keep me signed in* only on your own computer.

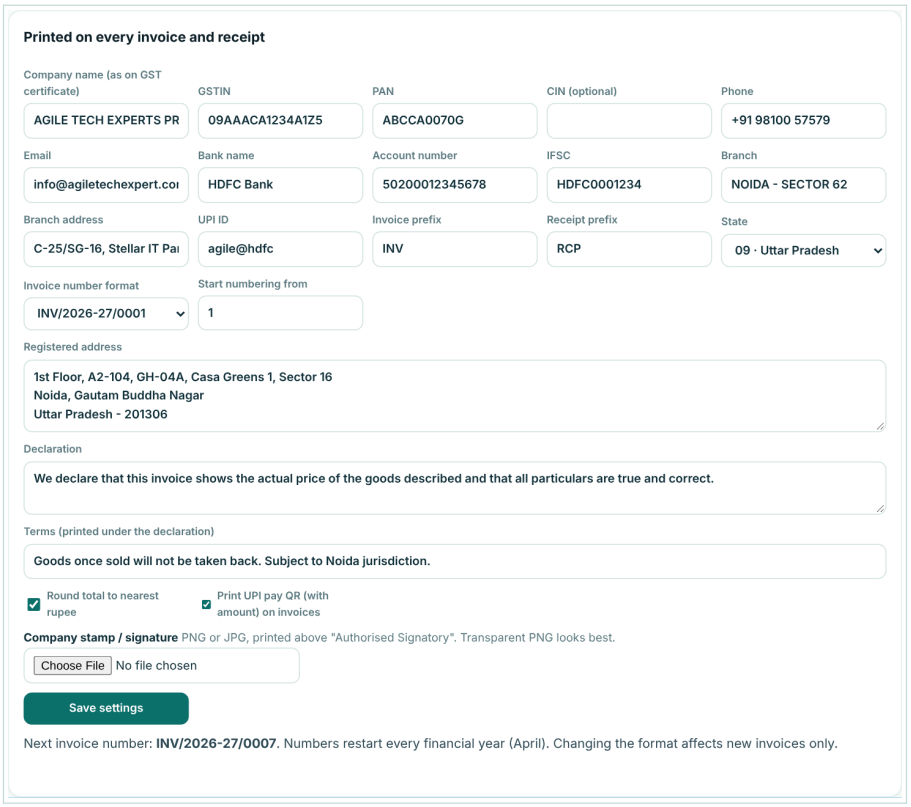

Employee sign-in page

Role	Can see	Typical user
Admin	Everything: leads, AI conversations, AI cost, users, billing, quotations, company settings, activity log	Owner / director
Accounts	Billing & inventory, quotations & letters	Accounts / billing staff
Staff	Overview, leads, AI conversations, quotations & letters (no billing)	Sales and support
Client	Only their own invoices and receipts (client portal)	Customers

The admin creates logins in **Users & accounts**. Every action (invoice, receipt, quotation, letter, stock change) is saved in the **Activity log** with the user's name and time.

2. First-time setup (admin)

Open **Billing & inventory -> Company settings**. These details print on every invoice, receipt, quotation and letter.

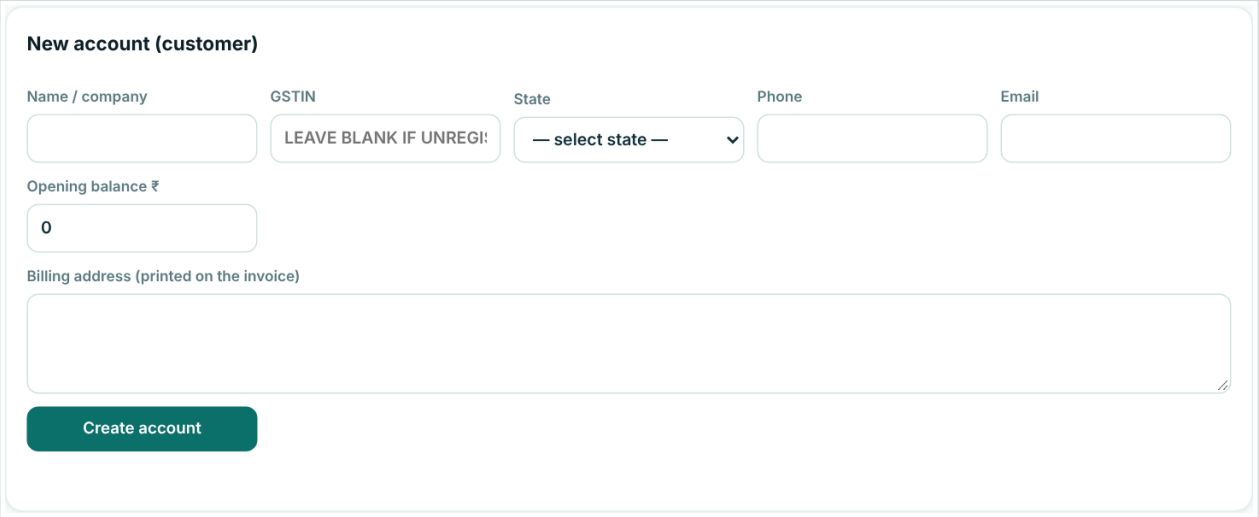

1. Check company name, GSTIN (09ABCCA0070G1Z2), PAN (ABCCA0070G), state and address. They are filled from the GST certificate.
2. Check bank details: Kotak Mahindra Bank, A/c 9917661331, IFSC KKBK0005032, Noida - Sector 62, UPI agiletech@kotak.
3. Keep **Print UPI pay QR** ticked. Each invoice then shows a QR with the balance amount and invoice number.
4. Upload the company **stamp / signature** (PNG with transparent background looks best).
5. Choose the **invoice number format** and the starting number, then click **Save settings**.

Numbers restart every financial year in April (for example AGILE/2027-28/0001). Changing the format only affects new invoices.

3. Customer accounts and ledger

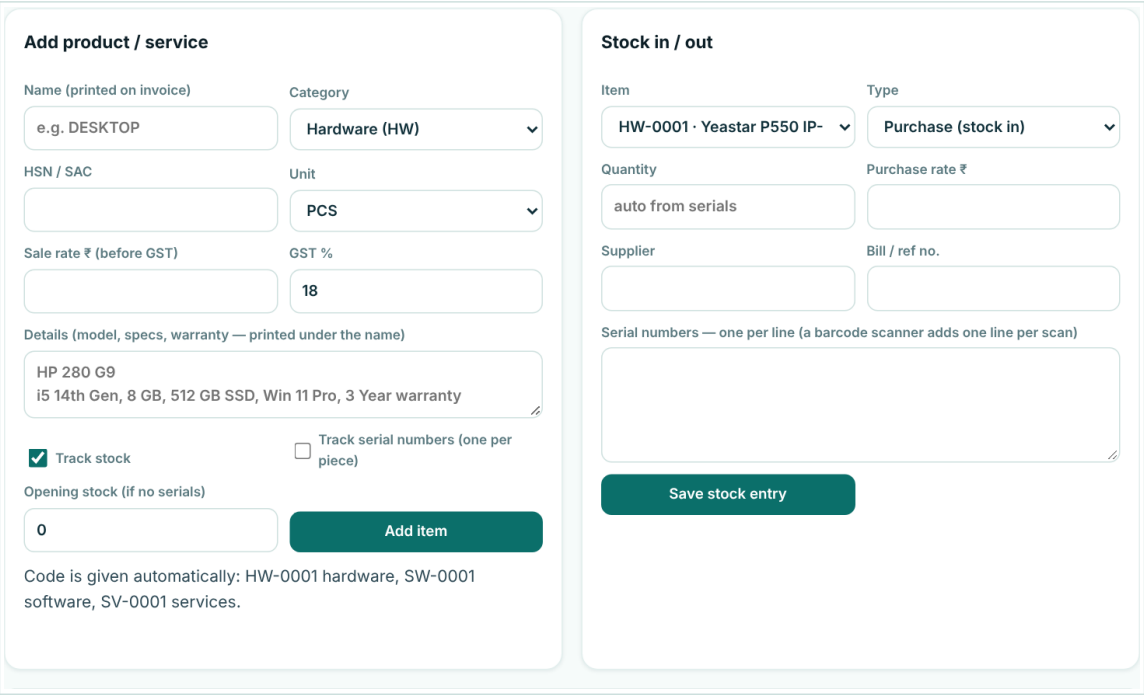

Every invoice belongs to an account, like a ledger in Tally, so the complete history of a customer stays in one place.

1. Go to **Accounts & ledger**.
2. Type the customer's name and GSTIN. The state fills itself from the first two digits of the GSTIN.
3. Enter the billing address exactly as it should print on the invoice. Add an opening balance if the customer already owes money.
4. Click **Create account**. The account gets a code like ACC-0001.
5. Click **Ledger** on any account to see all invoices and receipts with the running balance. Use **PDF** or **CSV** to download it (CSV opens in Excel).

Leave GSTIN blank for unregistered customers (individuals, small shops). The invoice will show "Unregistered".

4. Inventory, stock and serial numbers

Add a product or service

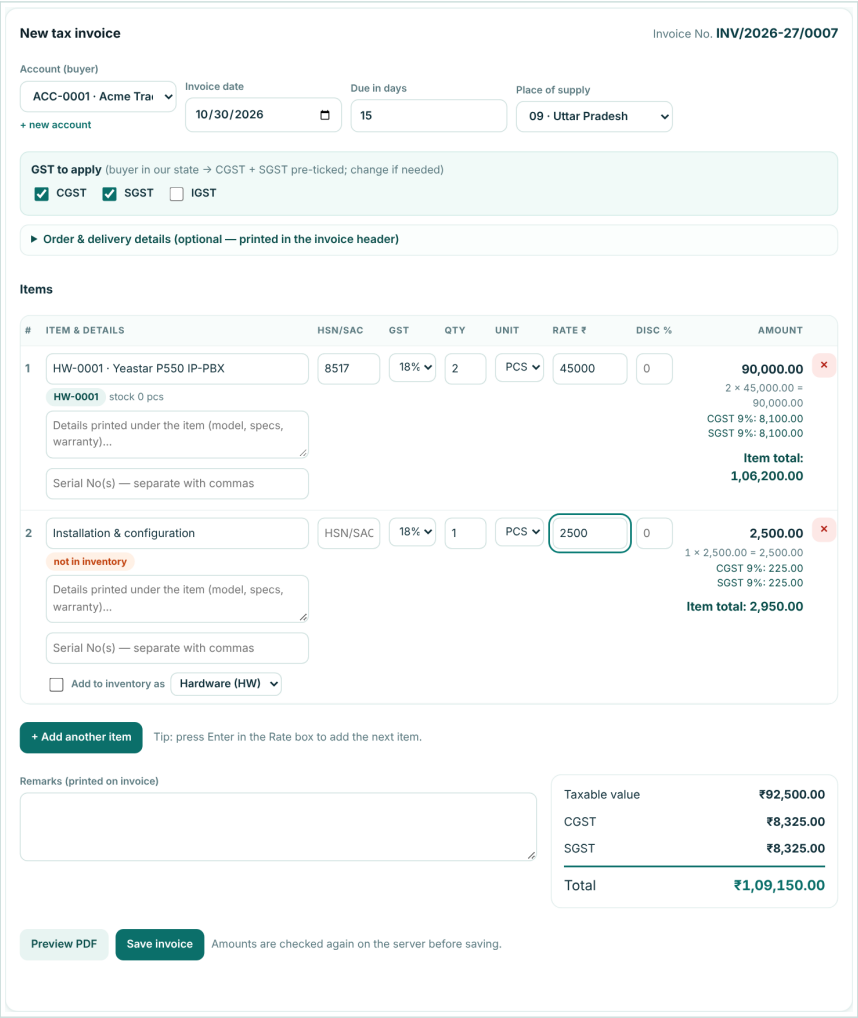

1. Go to **Inventory & stock**.
2. Enter the name exactly as it should print (for example DESKTOP), choose Hardware / Software / Service, HSN or SAC, unit, sale rate before GST and GST %.
3. Write the details in **Details** (model, processor, RAM, warranty). They print in italics under the item name on the invoice.
4. Tick **Track stock** for physical goods. Tick **Track serial numbers** for items that have a serial on each piece (desktops, laptops, phones, gateways).
5. Click **Add item**. The code is given automatically: HW-0001, SW-0001, SV-0001.

Stock in and stock out

1. In **Stock in / out**, choose the item and the type: Purchase, Return, Opening, Damaged, Correction.
2. Enter purchase rate, supplier and bill number.
3. For serial items, scan or type one serial number per line. Quantity is counted from the serials automatically.
4. Click **Save stock entry**. Use **History** on an item to see every movement and every serial number with its invoice.

A serial number cannot be billed twice. When an invoice is cancelled, its serial numbers go back into stock automatically.

5. Making a tax invoice

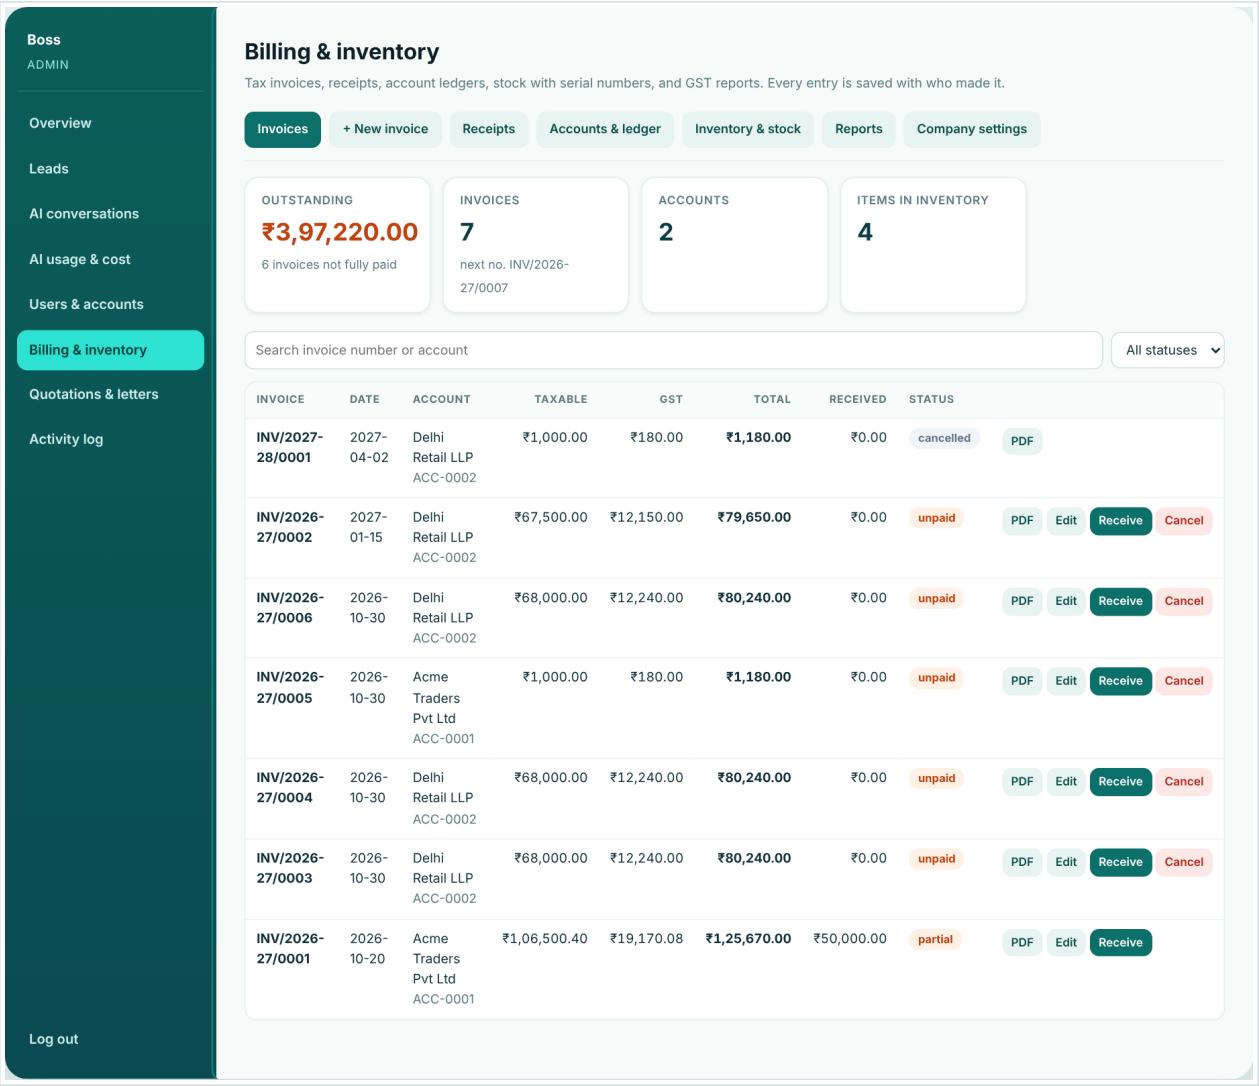

New tax invoice: each item shows Qty x Rate, then CGST/SGST/IGST separately, then the item total

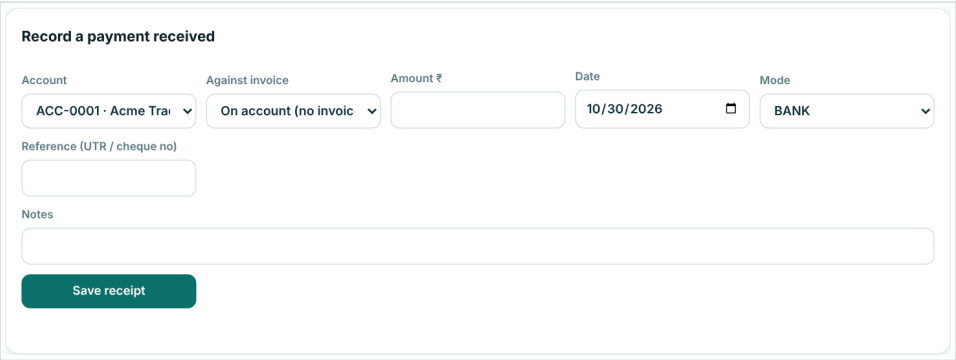

1. Click **+ New invoice**. The next number shows at the top right (AGILE/2026-27/0007). To use your own number, type it in the **Invoice No.** box; the portal stops you if that number is already used.
2. Choose the **Account**. GST is pre-ticked: **CGST + SGST** when the customer is in Uttar Pradesh (our state), **IGST** when the customer is in another state. Change the ticks only if your accountant says so.
3. In each item row, type the item code or name and pick it from the list: rate, HSN, GST % and details fill themselves. For something not in inventory, just type the name; tick **Add to inventory** to save it for next time.
4. Enter **Qty** and **Rate**. You can type a calculation like **5000*4** or **500*6**; it is worked out for you.
5. For serial items, click the serial numbers shown under the item (or type them, separated by commas).
6. Click **+ Add another item** (or press Enter in the Rate box) for more items.
7. Optional: open **Order & delivery details** for buyer's order no., delivery note, despatch details and a different *Ship to* address.
8. Click **Preview PDF** to check. Click **Save invoice**: the final PDF opens in a new tab to print, download or send.

The invoice follows the Tally format: header boxes, item table, CGST / SGST / IGST lines, HSN summary, amount in words, PAN, bank details, UPI QR and signature.

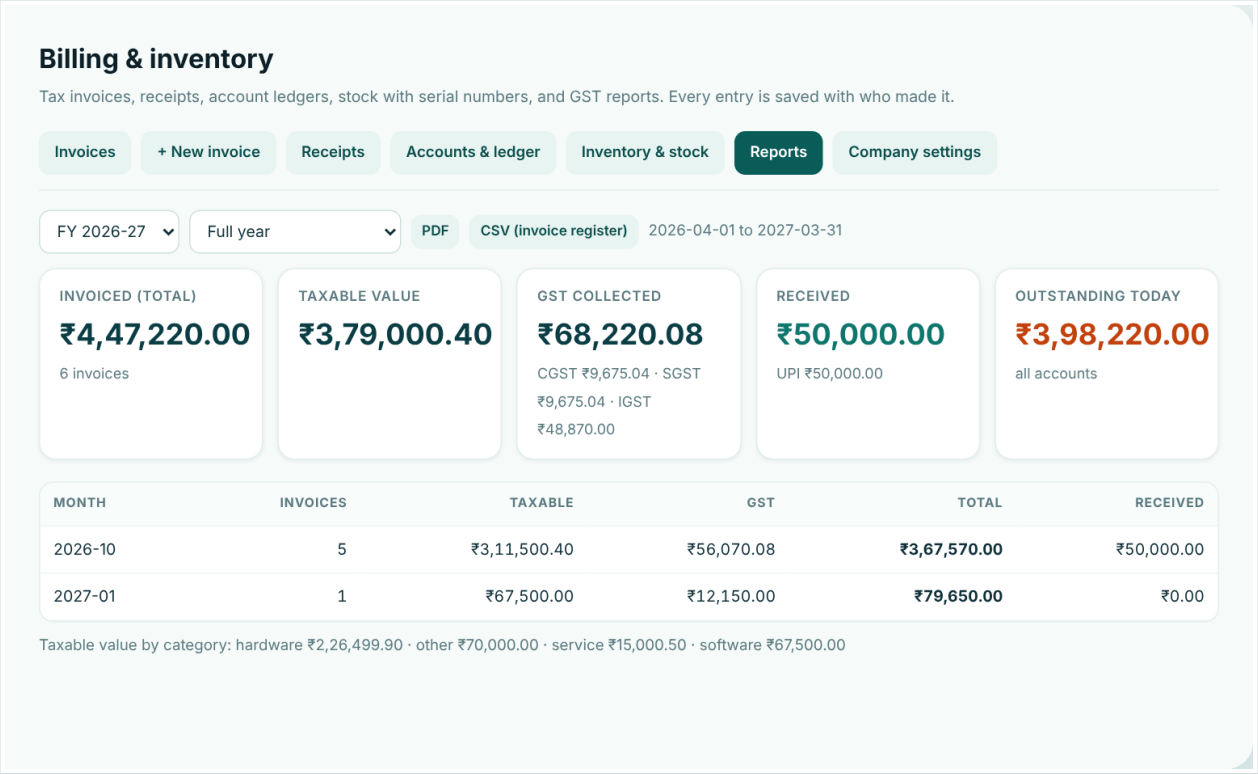

6. Editing, cancelling and receiving payment

- **Edit** - correct an invoice, including its number. Stock and serials are adjusted automatically. The date must stay in the same financial year.
- **Delete** (admin only) - removes an invoice that has no receipts. Accounts, items, receipts, quotations and letters can also be deleted when nothing depends on them. Prefer **Cancel** for invoices already sent to a customer, so GST numbering has no gaps.
- **Cancel** - an invoice is never deleted. It stays in the records with a CANCELLED stamp. Cancel any receipts against it first.
- **Receive** - record a payment. Choose the mode (bank, UPI, cash, cheque, card) and the UTR or cheque number. The invoice becomes *partial* or *paid* by itself and a receipt PDF opens.

7. Reports: quarterly, half-yearly and yearly

1. Go to **Reports**.
2. Choose the financial year and the period: Q1 (Apr-Jun), Q2 (Jul-Sep), Q3 (Oct-Dec), Q4 (Jan-Mar), H1, H2 or the full year.
3. See invoiced amount, taxable value, CGST / SGST / IGST, money received by mode and outstanding.
4. Download **PDF** for the summary, or **CSV** for the full invoice register to send to your CA.

8. Quotations

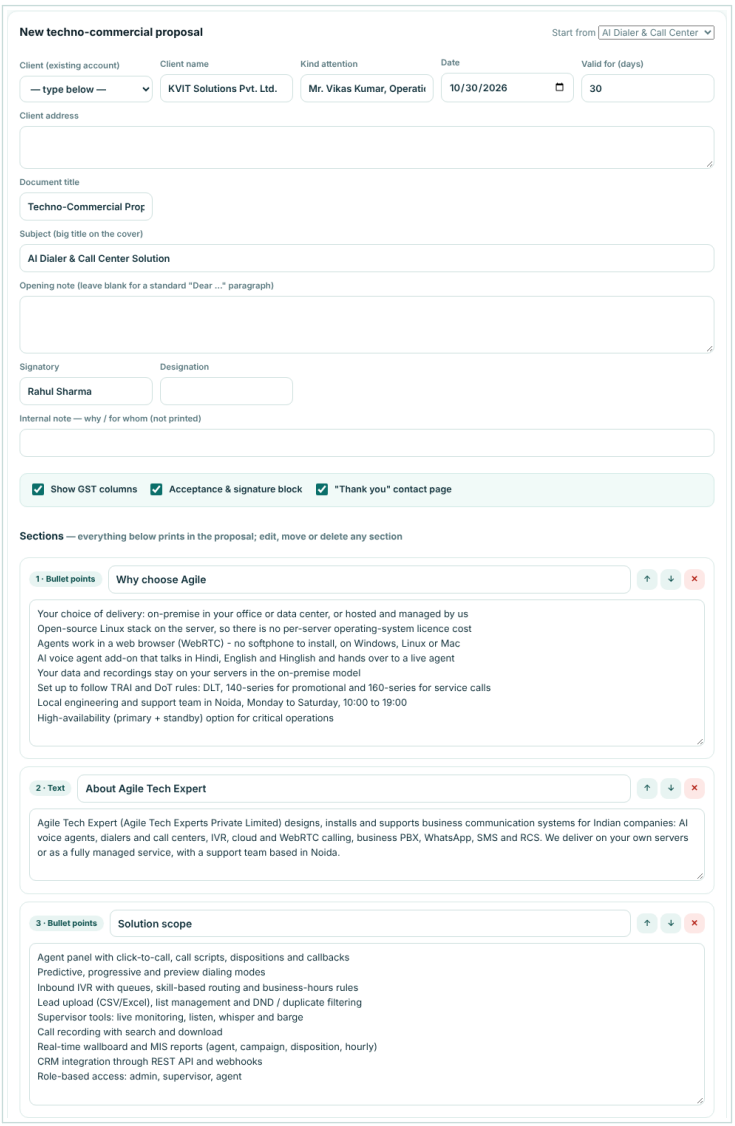

1. Open **Quotations & letters -> + New quotation**.
2. Pick a **template**: AI Voice Calling, IVR, Call Center, Bulk SMS / WhatsApp, Hardware, Software, or Blank. Subject, opening paragraph, items and terms fill in.
3. Choose an existing customer account, or type a new customer's name, address and GSTIN.
4. Change only the values: quantities, rates, item details. GST is worked out as on invoices.
5. Write an **internal note** (why / for whom). It is not printed, but it is saved so everyone knows the context later.
6. Click **Preview PDF**, then **Save quotation**. It gets a number like QTN/2026-27/0001 and prints on the letterhead.

- **Copy** makes a new quotation from an old one (useful for revised offers).
- Set the status: draft, sent, accepted, rejected.
- Accounts and admin users can click **Make invoice** to turn an accepted quotation into a tax invoice in one step.

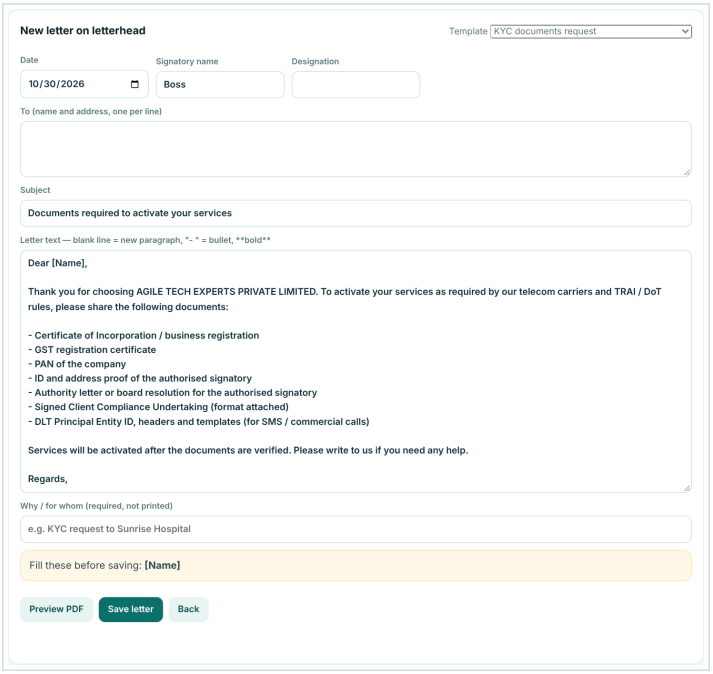

Techno-commercial proposals

For bigger deals, use **+ New proposal**. It makes a multi-page PDF: a cover page, your sections, pricing options with GST, terms, an acceptance block and a contact page.

1. Pick a starting point in **Start from**: AI Dialer & Call Center, AI Voice Agent, IVR & Cloud Telephony, Blank, or one of your saved templates.
2. Fill the client name, kind attention and address. Change the subject - it is the big title on the cover.
3. Edit any section: change the heading and text, move it up or down with the arrows, or delete it. Add new sections with the **Add section** buttons (text, bullet points, numbered points, pricing option, table, page break).
4. In a pricing option, type quantity and rate (calculations like 650*10 work). Each row shows its amount and GST; the option total shows below.
5. Click **Preview PDF**, then **Save proposal**. It gets a number like PRP/2026-27/0001.
6. Click **Save as my template** to reuse your own version next time - no need to ask anyone to change the format.

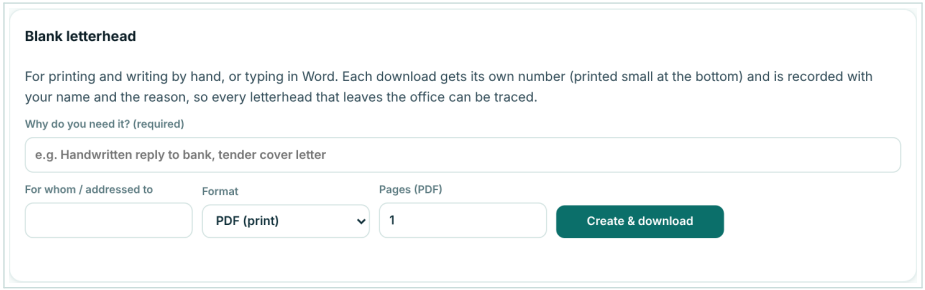

9. Letters and blank letterheads

Letters

1. Open **+ New letter** and pick a template: Blank letter, Client Compliance Undertaking, KYC documents request, Service activation, Payment reminder, Authorisation letter.
2. Fill the **To** address, subject and text. Replace every **[placeholder]**; the portal will not save while a placeholder remains.
3. Write **why / for whom** (required). Preview, then save. The letter gets a number like LTR/2026-27/0001.

Blank letterhead

Use this to print letterhead paper for hand-written letters, or a Word file to type in. You must write the reason. Each download gets its own number (printed small at the bottom) and is recorded with your name, so every letterhead that leaves the office can be traced.

10. Onboarding a calling / messaging client (compliance)

TRAI and DoT act against the numbers and connections used for spam or fraud. To protect the company, follow these steps for every client who gets numbers, SIP trunks, SMS / WhatsApp senders or calling software:

1. Send the **KYC documents request** letter. Collect: certificate of incorporation, GST certificate, company PAN, ID and address proof of the authorised signatory, authority letter.
2. Send the **Client Compliance Undertaking** letter format. The client signs and stamps it on their letterhead and returns it.
3. Check that the client is registered on **DLT** in its own name, with headers and templates.
4. Promotional calls only from **140-series**; service and transactional calls only from **160-series** numbers.
5. Keep all documents in the client's file. Do not activate anything until the documents and undertaking are received.
6. On any spam complaint or carrier alert: pause the client's campaign or number at once and inform the admin.

The company's public policies are at **agiletechexpert.com/legal/**: Terms of Service, Acceptable Use & Anti-Spam, Telecom Compliance, Privacy, Data Processing, Refund, Grievance Redressal and Disclaimer. Share these links with clients in quotations and onboarding emails.

11. Daily good practice and security

- Never share your password. Each person must use their own login - the activity log shows who did what.
- Always use **Preview PDF** before saving a new invoice or quotation.
- Never delete or re-type an invoice to "fix" it. Use **Edit** or **Cancel** so the record stays clean for GST.
- Record payments the same day with the UTR / cheque number.
- Send customers only the PDF from the portal - it has the correct bank details and QR. Warn customers never to pay to any other account.
- Download the quarterly report CSV for the CA at the end of each quarter.
- Log out on shared computers.

For admins: test data can be cleared from the server with `manage.py billing-reset transactions --yes` (keeps accounts, items and settings). Use it only before going live.

12. Quick help

Problem	What to do
"Tick CGST + SGST or IGST"	Tick the right GST boxes, or set GST % to 0 for exempt items.
"enter N serial number(s)"	The item tracks serials. Click the serials shown under the item or type one per piece.
"Serial ... is already billed"	That piece was sold on another invoice. Check the item's History.
Amount shows "check the number"	Qty or Rate has a typing mistake. Use digits and * + - / only.
PDF did not open	Your browser blocked the pop-up. Allow pop-ups for agiletechexpert.com, or use the PDF button in the list.
"Replace the [placeholders]"	A letter still has text in square brackets. Fill or delete it.
Can't see Billing	Your role is Staff. Ask the admin to change it to Accounts if you need billing.
Wrong company or bank details on PDFs	Admin: fix them in Company settings. Old PDFs re-generate with the new details.
